videodidact® Show

EBS introduces a new Generation of Screen Projection in Computer Classrooms

Instructors and teachers who are searching for a new way to make daily work in a computer classroom easier and more efficient by using a regular projector, will be pleased to hear about the new **videodidact Show** system developed by EBS Euchner Büro- und Schulsysteme GmbH (Germany).

What are today's projection choices?

The traditional projector creates a number of disadvantages. To achieve good screen definition and quality the projected screen must be adjusted. Depending on the model of the projector and size of room compromises must be made. The classroom must be darkened in order to lift the background off the projector screen. Screen resolution and the frequency of the PC must be adapted to the projector used.

After acquiring a projector further costs (such as spare parts, lamps, etc.) have to be considered. The use and connectivity of a projector are limited. A projector is usually only connected to the instructor's computer. EBS solves such problems with a new and very efficient method of screen transmission. Instead of this "one way street" (instructor to projector), **videodidact Show** transmits the teacher's screen to all student's monitors. Screen transmission can be achieved with only one keystroke to "ALL" in real time. Also, the teacher can attach a notebook to the system. This "simultaneous transmission" feature allows the presentation of a notebook and instructors' PC simultaneously to both projector and student's screens.

380 MHz technology allows screen transmission with the highest screen definition (for example 1600x1200) in real time. As a pure hardware system **videodidact Show** is totally independent of the hard- and software used in the classroom. Therefore, no further costs have to be considered!

videodidact Show is not only more flexible than a regular projector, but it also supports the teacher "educationally". Due to the real time transmission to the students' screen students pay more attention.

Manufacturer of the **videodidact Show** systems is EBS Euchner Büro- und Schulsysteme GmbH in Heusenstamm (Germany).

For more than 17 years EBS has specialised in the development of educational systems and has gained experience by selling and equipping more than 10,000 systems into classrooms worldwide.

Further products from EBS are **videodidact Select**, **videodidact View**, **alphadidact** as well as the **Advanced System!**
