

More success by

interactive presentations

Maximum Learning Success by Visualization

The visual presentation of studying contents plays a bigger and bigger role in the daily teaching and training business. Experience shows that listening purely leads only to restricted memo value. Already by the support of visual aids the retentiveness is increased considerably. The maximum learning success is achieved with a combination of acoustic and visual arrangements and with the possibility of participating actively. videodidact® View combines these features in an ideal way. With the touch of a button videodidact® View transmits the screen image of an arbitrary student (without any delay) to the instructor's screen, or to a projector (in real time) and enables each student to participate actively. Each student can do his/her individual presentation. Disturbing or bad lighting conditions as well as the darkening of the room no longer are existent.

The handling of the videodidact View Systems is done over the instructor's keyboard. Each function can be carried out with the touch of a button. All buttons are clearly marked, special functions in special colors.

Screen Release (Help Function)

The call for help offers every student the possibility of calling the instructor. By pushing the Help Button at the respective student place an acoustic and a visual signal is notified on instructor's videodidact keyboard. The instructor can support the students with the video transmission and via the remote control.

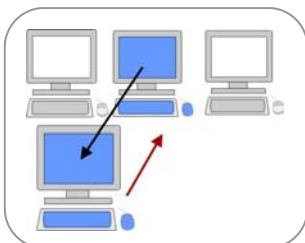

AudioLine (Voice Function / Sound Transfer)

With the optional AudioLine you have the great additional possibility to not only transmit screen contents but sound (stereo quality) as well. The transmission of sound is automatically connected to the screen transmission. No further steps during installation necessary.

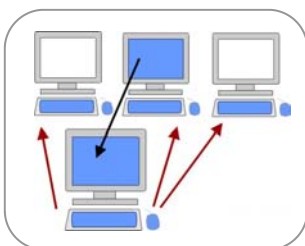

Systems including AudioLine can be delivered either with headphones, or as direct connection. You can choose between receiving sound over a headset or to one (or more) speakers (or other sound systems). Other sound resources such as sound card, DVD, etc. can also be integrated to the **videodidact® View** system.

Remote Control and Lock of students keyboards and mice

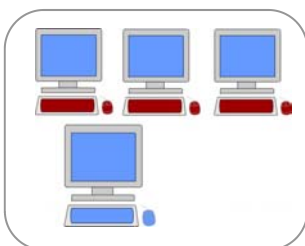

Single Remote Control

videodidact® Select offers the optional opportunity to remote control individual student workstations. Due to the “interactive” function of the Remote Control the students' keyboards and mice remain available. Student and instructor can both work on the student's PC.

Remote Control All (Supervisor Function)

The Supervisor Function is important for maintenance and installation of all workstations. With only one keystroke the instructor has access to all PC's attached and can operate all computers with his keyboard and mouse at the same time (only possible in PS/2 mode - unfortunately not possible with USB).

Locking of Keyboards and Mice

The instructor can lock keyboard and mouse of either a single student, or all students with this separate function.

- All products “Made in Germany“
- Quality specifications CE, TÜV/GS, VDE
- 3 year warranty
